

# Installation & Operational Manual

## Radio Over IP Gateway

Model RoIP400

Firmware Version 6.0.0.19

### RoIP Box Contents

1. Radio Over IP Gateway
2. Ethernet Cable
3. Radio Interface Cable
4. Power Adopter 9V DC
5. Quick Installation Guide

## BASIC INSTALLATION

### Hardware Interface Overview

CONNECTOR TYPE	INTERFACE	DESCRIPTION
Power connector	Power interface	Power connector to provide external DC power supply to ROIP
Ethernet (RJ45 )	LAN interface	LAN port provides LAN connectivity with other ROIP or Computers.
(RJ45) x 4 Nos	Radio Interface (RA1, RA2, RA3, RA4)	Radio connector to interface with 4 Radio Set

Manufactured by

Version 1.0 (March 2023)

## Hardware Front Overview

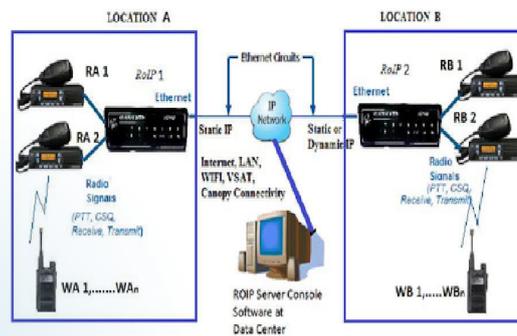

LED	COLOR	STATUS	DESCRIPTION
PWR	RED	ON	System Power ON
		OFF	System Power OFF
LINK L1/L2 L3/L4	L1/L2-RED/GREEN	Blinking	ROIP Connection not established
		RED ON (Constant)	Connection 1 - established
	L1/L2-RED/GREEN	Blinking	ROIP Connection not established
		GREEN ON (Constant)	ROIP Connection 2 - established
	L1/L2-RED/GREEN	ORANGE ON (Constant)	ROIP Connection 1 & 2 established.
	L3/L4-RED/GREEN	Blinking	ROIP Connection not established
		RED ON (Constant)	Connection 3 - Connected
	L3/L4-RED/GREEN	Blinking	ROIP Connection not established
GREEN ON (Constant)		Connection 4 - Connected	
L3/L4-RED/GREEN	ORANGE ON (Constant)	ROIP Connection 3 & 4 established.	
Radio R1, R2, R3, R4	RED (PTT)	ON	Radio Set Connected is in Transmit Mode (1, 2, 3, 4 denotes corresponding Radio Port)
	GREEN (CSQ)	ON	Radio Set Connected is in Receiving Mode (1, 2, 3, 4 denotes corresponding Radio Port)

Version 1.0 (March 2023)

## ROIP Quick Setup Guide

- Plug the Power Adaptor in RoIP
- Connect Lan Cable in the RoIP and other end to your Laptop/ Desktop.
- Configure your Laptop/ Desktop Ethernet Adapter IPv4 Settings to Manual with following IP Settings:  
(IP Address / Subnet Mask)  
192.168.1.20 / 255.255.255.0
- Open Web Browser and enter RoIP Default IP: 192.168.1.80
- Default Login Password is : admin
- Open IP config Settings.
- Configure the Local IP Settings of ROIP Device which you need. Click on Save and reboot.
- Connect Radio Interface Cable at RoIP Radio Port (RJ-45 Connector) and other end at Radio Accessory Connector Port.
- Configure the Server IP Settings with the Remote ROIP/ Server IP/Port and Save.
- Once the RoIP Link Led turns to Permanent On, your RoIP System is connected and Ready to Use.

Version 1.0 (March 2023)

## SETTINGS CONFIGURATION

### Computer IP Configuration to configure ROIP

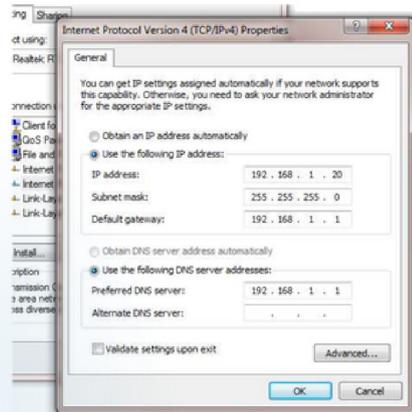

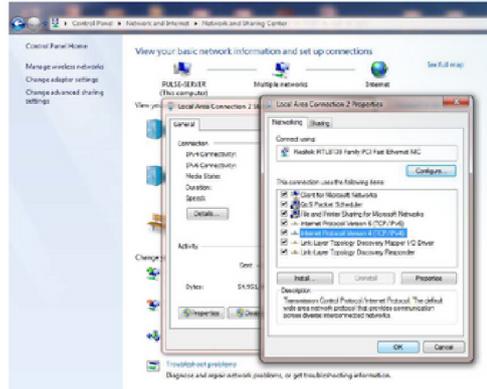

- Go to Control Panel→ Network and Internet→ Network and Sharing Center
- Click on Local Area Connection/ Wireless Network Connection.
- Click "Properties".

- Select "Internet Protocol Version 4 TCP/IPv4" and Click "Properties".
- Select "Use the following IP address" option.
- Enter IP Address of computer (should be in the same local network range as of ROIP). If ROIP is in default mode, enter "192.168.1.x" (x is any value from 1 to 254 other than 80)
- Enter Subnet Mask. If ROIP is in default mode, enter "255.255.255.0"
- Enter Default Gateway. If ROIP is in default mode, enter "192.168.1.1"

Version 1.0 (March 2023)

Manufactured by  
**STACKIOT TECHNOLOGIES PRIVATE LIMITED**  
[www.stackiot.tech](http://www.stackiot.tech) [support@stackiot.tech](mailto:support@stackiot.tech)

Version 1.0 (March 2023)

## Factory Default ROIP Settings

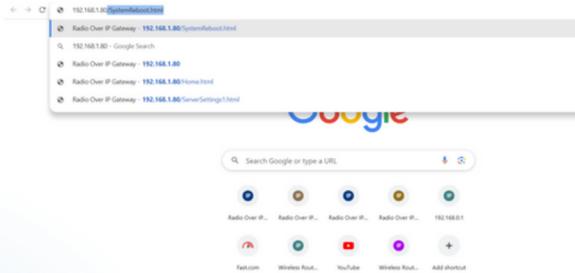

### IP Settings:

Local IP: "192.168.1.80"  
Subnet Mask: "255.255.255.0"  
Gateway: "192.168.1.1"  
Password: "admin" (without using "")

### ROIP Configuration

- Connect ROIP to a computer/laptop using Ethernet Cable and follow "Computer IP Configuration" procedure.
- Open a Web browser (Internet Explorer, Mozilla Firefox, Chrome, etc) on the computer.
- Enter the Local IP address of the ROIP on the address bar of web browser as shown below ( factory default: "192.168.1.80"):

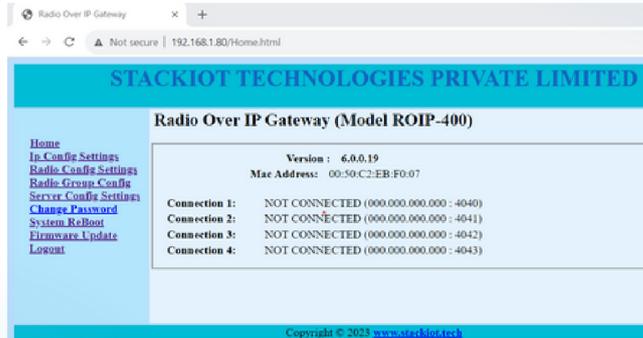

- A Login page will appear as shown below. Enter login password and press Login (factory default: admin).

**STACKIOT TECHNOLOGIES PRIVATE LIMITED**  
[www.stackiot.tech](http://www.stackiot.tech) [support@stackiot.tech](mailto:support@stackiot.tech)

Version 1.0 (March 2023)

- Radio Over IP Gateway Settings Home Page will appear as below.

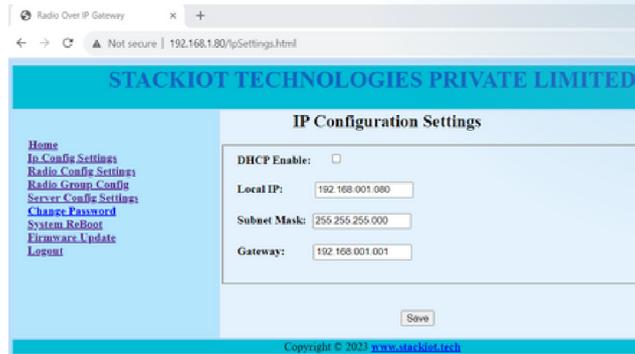

### Local-IP Settings Configuration

- Select "IP Config Settings" on the Home Page.
- An IP Configuration Settings Page will open as shown below.
- Modify values as mentioned in "System Configuration".
- Click on Save to confirm the changes.
- Reset Power of Roip for changes to take effect.

Manufactured by  
**STACKIOT TECHNOLOGIES PRIVATE LIMITED**  
[www.stackiot.tech](http://www.stackiot.tech)    [support@stackiot.tech](mailto:support@stackiot.tech)

Version 1.0 (March 2023)

- You can also change IP Configuration.
- Select DHCP Enable Checkbox to request IP Configuration Settings from the Network Gateway / DHCP Server

### Server IP Configuration

- On this Page, we will configure the Server Connection Details to connect to the RoIP Server.
- There are four connection Ports provided to enter Connection Details for four Server. They could be configured either in Multi-Connection or as Redundant Mode.
- Remote IP : Enter the Server IP Address or leave as blank or 0.0.0.0 if not available.
- Remote Port: Enter the Port Address on Server where this RoIP will connect. Check User Configuration Settings on the RoIP Server for this RoIP Account Port details

### Other Configuration Settings

Connection Port: <input type="text" value="CONN 1"/>	Parallel Group: <input type="checkbox"/>
Remote IP: <input type="text" value="000.000.000.000"/>	Radio Port/Group Map: <input type="text" value="RADIO PORT 1"/>
Remote Port: <input type="text" value="4040"/>	Local Port: <input type="text" value="4040"/>
Eth Link Config: <input type="checkbox"/>	WAN Dynamic IP: <input type="checkbox"/>
Connection Less Transmission: <input type="checkbox"/>	Port Forwarding Enable: <input type="checkbox"/>
Health Time Out: <input type="text" value="000010"/>	
Health Retry: <input type="text" value="000007"/>	Connection Timer: <input type="text" value="000005"/>
Connection Wait Timer: <input type="text" value="000001"/>	Connection Retry Count: <input type="text" value="000020"/>

- Local Port: This is the Local Port of RoIP Device from which it will make the IP Connection to Server. Leave it as default. It would be 4040 for Connection 1, 4041 for Connection 2 and so on upto four ports.
- Click on Save.
- Click on System Reboot after Saved Successfully is shown.

### Radio Settings Configuration

- Select "Radio Config Settings" on the Home Page.
- A Radio Configuration Settings Page will open as shown below.
- Modify values as mentioned in "System Configuration".
- Click on save to confirm the changes.
- Reset Power of ROIP for changes to take effect.

- Active High CSQ: Enable Option if CSQ is Active High.
- Vox Mode: Enable Option for Vox mode operation, CSQ Signal not coming from Radio Set.
- CSQ Priority High: Enable option for permanent Call Active Mode.
- Config Type: Select "Simplex" for Radio Communication (default).
- Vox Delay: Vox Delay value in millisecond, applicable only when Vox mode is enabled.
- Vox Threshold: Minimum threshold audio level to trigger CSQ Signal in Vox mode. (Range: 0 to 255).
- PTT Delay Timer: PTT Audio Delay/Buffering Timer in millisecond.
- PTT Time Out Timer: Max Continuous PTT Enable Timer (in millisecond). Enter 0 to disable the feature.

Version 1.0 (March 2023)

- PTT Release Timer: CSQ Signal Wait Timer (in millisecond) after PTT signal is disabled.
- PTT Cut off Timer: Transmit Audio Cut off Timer at end to truncate.

### RADIO GROUP Configuration

- Select "Radio group Config " on the Home Page.
- A Radio group configuration Settings Page will open as shown below. Create Group as per your requirement.
- Click on Save to confirm the changes.
- Reset Power of ROIP for changes to take effect .

## Change Login Password

- Select “Change Password” on the Home Page.
- A Change Login Password Page will open as show on web as shown below.
- Enter “Old Password” , “New Password”, Re-Enter “New Password” Click on Save to change password
- Click on System reboot ROIP for changes to take effect..

## Reset ROIP to Factory Default Settings

- Power On the ROIP.
- Locate a small press button near power on/off switch of ROIP.
- Press the button for 5-6 seconds while the ROIP wise led on, till all led at the front panel blinks twice.
- Reset Power of ROIP for changes to take effect.

## RADIO Interface CONFIGURATION

### Interface Cable Connections

RJ-45 MALE CONNECTOR  
(INTERFACE CABLE ROIP SIDE)

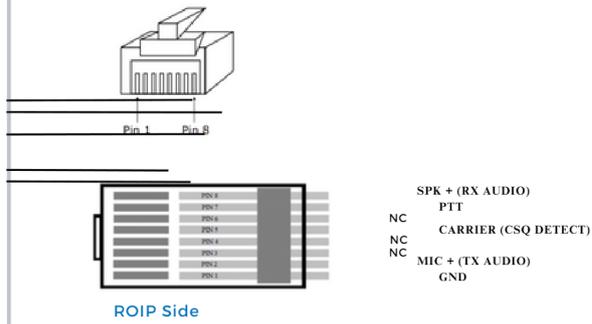

RJ-45 FEMALE CONNECTOR  
(ROIP BACK PANEL)

## Connections At ROIP

ROIP Side

ROIP (RJ 45)	Description
PIN 1	GND
PIN 2	TX AUDIO (MIC +)
PIN 5	CARRIER (CSQ DETECT)
PIN 7	PTT
PIN 8	RX AUDIO (SPK +)

*Caution: The 16 pin connector supplied with the equipment is non-polarized. Extreme care must be taken before connecting to radio. Connector is marked as RADIO TOP Cover Side/ RADIO Sr. No.*

Version 1.0 (March 2023)

## QUICK TROUBLESHOOT

Indication	Problem	Resolution
Link Led Off	Ethernet not initialized	Reset Power of Roip and check for Lan Connection Led on the Ethernet (RJ45) Connector.
Link Led Blinking Fast	Connection Not Established	Check Lan Connection. Check Ping status of both IP. Check ROIP IP Configuration
Lan Connection Led Off/Blinking	Not Connected to LAN	Check Ethernet Cable.
Radio Receiving but CSQ Led not glowing	ROIP not receiving	Check Interface Cable. Check Radio Configuration Settings for CSQ mode or Vox mode. Check Radio Settings.
PTT Led glowing but Radio not transmitting	Radio not transmitting	Check Interface Cable. Check Radio Settings.
ROIP's CSQ Led glowing but other ROIP's PTT Led not glowing	Connection Break	Check Lan Connection. Check Ping status of both IP. Check ROIP IP Configuration.
